 github.com/VEDANG2024  Ahmedabad, Gujarat, India

Profile Summary

Automation and analytics engineer with expertise in Power Platform development (Power Apps, Power BI, Power Automate), SQL-driven data analysis, and applied machine learning for systems optimization. Proven track record of replacing manual, spreadsheet-and-email-driven processes with production software. Shipped two Power Platform suites at Kraft Heinz now used daily by **50+ people** across **10 towers**, estimated to save **1,600+ hours** and roughly **Rs. 12.3L** a year. Also skilled in distributed systems and query optimization, with research including an LLM-routing model that cuts inference cost by **78%** and a learned cardinality estimator for query-plan optimization.

Technical Skills

Languages: C, C++, Python, SQL, JavaScript

Data & BI: Power BI, Advanced Excel, SQL, Pandas/NumPy, NLTK/spaCy

App Dev & Automation: Power Apps, Power Automate, Git/GitHub, Figma, LangChain

Databases: PostgreSQL, MongoDB, MySQL, Redis

Business: Requirements Gathering, SOP Documentation, Operational Excellence, Six Sigma, Stakeholder Management

Professional Experience

Kraft Heinz

KHMS/AIT Intern, GCC India

Feb 2026 – Present

Ahmedabad, Gujarat

- Designed and built the AIT Power App after noticing that improvement ideas across GCC and Genpact were getting lost in email threads and personal spreadsheets. The app now guides an idea from submission through a gamified leaderboard for **50+ users** across **10 towers**, and is estimated to save **1,350+ hours a year** (~Rs. **10.1L**) that used to go into manually logging and chasing opportunities.
- Automated three recurring manual chores inside AIT – status-update emails, Rate Card lookups, and weekly leadership reports – cutting an estimated **1,000+ hours a year** of email work and taking Rate Card completion from ~40% (often skipped due to the extra lookup step) to **100%**. Also administered access for the full user base, adding a limited-permission tier so contributors could edit their own entries without full admin rights.
- Moved Health Check reporting off scattered Excel files onto a structured SharePoint backend, then built a Health Check and OpEx Survey app suite on top for **50+ users** across **10 towers** – replacing a process that took hours of manual consolidation each month with one estimated to save **267 hours a year**. Also mapped the GCC hierarchy in Mavim to support process analysis.

Karma Technolabs

Web Development Intern

Jan 2024 – Apr 2024

Ahmedabad, Gujarat

- Enhanced search, filter, and upload features on a live CRM platform, gaining exposure to the full development-to-deployment lifecycle.

JS Placements and Fiscal Services

Coordinator

Feb 2022 – Feb 2023

Ahmedabad, Gujarat

- Conducted research and compiled documentation, and coordinated communication between clients, candidates, and team members through a standardized pipeline.

Projects

UGAD-Lite: Uncertainty-Guided Adaptive Distillation | ML Systems

- Cut LLM inference cost and token usage by 78% at a 94.8% task success rate by engineering an entropy-conformal router that dynamically directs queries between a large LLM (GPT-4o) and a fine-tuned Small Language Model (Phi-3-Mini via QLoRA).

CardEst | SQL, Query Optimization

- Cut query latency and resource usage in 70% of evaluated cases by building an XGBoost-based cardinality estimator on the TPC-H dataset to improve query-plan accuracy.

Raft Census (DBFS) | Distributed Systems

- Built a decentralized, chunked file-storage system supporting concurrent multi-client read/write operations across a dynamic server overlay.

UML2PlantUML | LLMs, Machine Learning

- Reproduced a published research pipeline (arXiv:2503.12293), fine-tuning and benchmarking 7 vision-language models (ViT-BART, BLIP, Flan-T5, ViT-GPT2, Pix2Struct, CLIP, MiniCPM) to generate PlantUML code from class diagram images.

Hybrid Stock Market Price Prediction | Data Analytics, NLP

- Built a hybrid forecasting pipeline combining time-series price data with NLTK/spaCy textual analysis, covering collection, storage, visualization, and model evaluation end-to-end.

Education

DA-IICT (Dhirubhai Ambani Institute of Information and Communication Technology)

M.Tech, ICT (Software Systems) | CPI: 7.47/10

2024 – 2026

Gandhinagar, Gujarat

Gujarat Technological University

B.E., Computer Engineering | CGPA: 7.77/10

2020 – 2024

Ahmedabad, Gujarat

Positions of Responsibility

Teaching Assistant – Software Engineering & Object-Oriented Programming

DA-IICT, Gandhinagar

2024 – 2026

Gandhinagar, Gujarat

- Conducted labs and doubt-clearing sessions of 100+ students, designed and evaluated assignments/exams, and mentored students in Software Engineering and Object-Oriented Programming.

Cadet

NO.2 Gujarat Air Squadron, NCC Unit

2021 – 2022

Ahmedabad, Gujarat

- Held and led various campaigns as a cadet, developing discipline and team leadership.

Achievements

- GATE CS 2024 qualifier | Bronze medal, SOF Maths Olympiad 2018 (zonal rank) | Inter-college chess champion.
